Nordic ID RF651

Intelligence any time, any where

NORDICID

Nordic ID RF651

-flexibility where you need it

The Nordic ID RF651 offers a quick and efficient way to access business information anytime, anywhere. Thanks to the ergonomic design the unit can truly be operated all day long.

The Nordic ID RF651 series is a data collection system based on Bluetooth* technology. Whether it is a production line, sales outlet or a warehouse, the powerful and secure Bluetooth will extend the company data system to where the employees need it. For instance, should the customer need extra product information, the sales assistant will be able to have the information displayed on the clear Nordic ID RF651 screen by merely scanning the barcode.

Nordic ID RF651 offers a barcode scanner, a keyboard and a clear display in one, ergonomically designed device. In true Nordic ID style the new RF651 has easy one handed operation as all buttons can be reached by a thumb. Even equipped with a scanner it only weights approx. 250 grams, thus it is easy to use all day long.

Bluetooth is a global standard

Bluetooth uses the same frequency (2.4 Ghz) all over the world. This makes the Nordic ID RF651 a global device that can be used everywhere.

Nordic ID RF651 adjusts to various environments

The RF651 handheld is suitable for both the small environment as well as large areas.

Nordic ID RF651 with Bluetooth Access Server

The Nordic ID RF651 hand terminal is a part of a wireless data collection system that consists of several handheld units and access servers. The data collected using the RF651 is encrypted and transmitted to the customer application. This can be running either on a personal computer or on a large information system. The access servers are linked to the host system through a LAN network. The applications run on the host computer, which means that the Nordic ID RF651s need no programming. Data transmission takes place in real-time. Developing and updating the applications is extremely easy.

The Nordic ID RF651 is the first hand terminal to support Bluetooth roaming. So extending the coverage area can be done by just adding another access server to the system.

Rapid deployment via USB in small environments

In a small business where only few people are using a handheld at a time and the operational area is not large such as a kiosk, small shop or petrol stations, the RF651 is a perfect choice. The Nordic ID RF651 can utilise a Bluetooth USB adapter to form a network serving up to seven Bluetooth devices. The installation is simple, just plug in the USB adapter into the USB port, install Nordic ID's Port Router* -software and you are ready to go. Solutions for RF651 can include mobile printing with Bluetooth printers or other Bluetooth devices.

* Nordic ID Port Router is sold separately

* Bluetooth is a registered trademark of Bluetooth SIG

Today, numerous companies are using Nordic ID handheld devices. Those devices are used to monitor inventories in stores, to reserve tables at restaurants, or in warehouses to follow material flows. With stocktaking, product amounts can update the stock accounting system wirelessly and in real-time, by using the Nordic ID RF651.

Efficiency with security

The Nordic ID RF651 introduces many new benefits to wireless data collection. One of the most important is data transmission security. The RF651 uses Bluetooth in communication between the device and backend system. Bluetooth uses a strong 56-bit encryption and it can be set to use even stronger 128-bit encryption. It is protected by PIN codes and can be used with business critical information within the company's data system. Another important feature is the immunity level of a Bluetooth connection. Data can be efficiently transmitted even where conventional radio lines are cut off. This is why the Nordic ID RF651 is ideal

for industrial plants containing many sources of interference as well as sales outlets surrounded by busy streets. Nordic ID offers companies many ways of increasing their efficiency. As it easily adjusts to different purposes, the RF651 makes a brilliant mobile retail assistant providing any company with the extra tool to improve their customer service. Using a lightweight and portable card reader/printer the RF651 becomes a mobile point-of-sale terminal. Read the credit cards, have the transaction securely authorised and print the customer's receipt. Easy - both for the sales clerk and the customer.
