NORDIC ID HH85
PRODUCT INTRODUCTION

NORDIC ID HH85

Time to meet the toughest member of the Android family.

Created in the forests of Finland. The Nordic ID HH85 builds on an **IP65** and **1.6-meter** drop tested frame which is useful when tracking your assets in difficult environments. The ergonomic **pistol grip** design is easy to hold even when wearing gloves.

In these challenging conditions the reader must perform, and this is where one of the lightest, rugged designs in the RFID market can help. The battery gives you up to 18 hours of continuous operation while using one of the largest displays in the industry.
Of course you need brains and brawn. The Nordic ID HH85 is equipped with **Android 9** software that complies with your IT rules and fits your needs perfectly.

The software also allows options that are designed to help. The camera can capture important information regarding possible damage to your assets or reception of goods.
This rugged, intelligent, and flexible device is the perfect match for industrial applications.
