

## Cisco Wireless LAN Controllers

The Cisco® 4400 Series Wireless LAN Controller provides systemwide wireless LAN functions for medium to large-sized facilities. By automating WLAN configuration and management functions, network managers have the control, security, redundancy, and reliability needed to cost-effectively scale and manage their wireless networks as easily as they scale and manage their traditional wired networks. The Cisco 4400 Series Wireless LAN Controller (Figure 1) works in conjunction with Cisco Aironet® lightweight access points, the Cisco Wireless Control System (WCS), and the Cisco Wireless Location Appliance to support business-critical wireless data, voice, and video applications. It provides real-time communication between lightweight access points and other wireless LAN controllers to deliver centralized security policies, wireless intrusion prevention system (IPS) capabilities, award-winning RF management, quality of service (QoS), and mobility.

**Figure 1.** Cisco 4400 Series Wireless LAN Controller

The Cisco 4400 Series Wireless LAN Controller is available in two models. The Cisco 4402 Wireless LAN Controller with two 1 GB Ethernet ports comes in configurations that support 12, 25, and 50 access points. The Cisco 4404 Wireless LAN Controller with four 1 GB Ethernet ports supports 100 access points. The Cisco 4402 controller provides one expansion slot. The Cisco 4404 controller provides two expansion slots that can be used to add VPN termination today, as well as enhanced functionality in the future. In addition, each Cisco 4400 WLAN Controller supports an optional redundant power supply to ensure maximum availability.

## Product Specifications

Table 1 lists the product specification for Cisco 4400 Series wireless LAN controllers.

**Table 2.** Ordering Information for Cisco 4400 Series Wireless LAN Controllers

Part Number	Product Name
<b>AIR-WLC4402-12-K9</b>	4400 Series WLAN Controller for up to 12 Cisco lightweight access points
<b>AIR-WLC4402-25-K9</b>	4400 Series WLAN Controller for up to 25 Cisco lightweight access points
<b>AIR-WLC4402-50-K9</b>	4400 Series WLAN Controller for up to 50 Cisco lightweight access points
<b>AIR-WLC4404-100-K9</b>	4400 Series WLAN Controller for up to 100 Cisco lightweight access points
<b>AIR-PWR-4400-AC=</b>	4400 Series WLAN Controller AC Power Supply (redundant)
<b>AIR-VPN-4400-K9=</b>	4400 Series WLAN Controller VPN Termination Module

## Summary

The Cisco 4400 Series Wireless LAN Controller is ideal for enterprise and service provider wireless LAN deployments. It simplifies deployment and operation of wireless networks, helping to ensure smooth performance, enhance security, and maximize network availability. The Cisco 4400 Series Wireless LAN Controller manages all of the Cisco lightweight access points within campus environments and branch locations, eliminating complexity and providing network administrators with visibility and control of their wireless LANs.

## Service and Support

Cisco offers a wide range of services programs to accelerate customer success. These innovative services programs are delivered through a unique combination of people, processes, tools, and partners, resulting in high levels of customer satisfaction. Cisco services help you protect your network investment, optimize network operations, and prepare your network for new applications to extend network intelligence and the power of your business.
